

# BRaille PHONE

A new generation braille display that can also make phone calls.

Built-in SIM card, so you can access the internet anytime, anywhere.

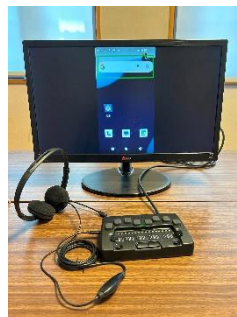

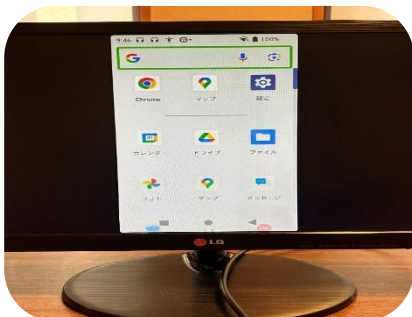

The Braille Phone is a new generation 16-digit braille display that can fit a built-in SIM card and is compatible with Android.

The built-in SIM card allows you to access the Internet anywhere, and Wi-Fi is also available.

In addition, it is compatible with Android, and various software can be used via Google Play, as well as making calls and using LINE. Just like a regular braille display, it can be connected to a computer and use various braille software.

Various settings can be easily adjusted using the voice function and braille key operation.

You can enjoy a variety of functions, such as mutual communication using braille data and voice communication via LINE.
